General Information

The NIS[®] Universal Joint business model, consists of development, design, manufacturing and marketing a product which represents, and is re-known for quality.

Catering to a market, consisting of automotive, mid range truck, 4WD (Wheel Drive) pleasure vehicle, to large-scale mining mobile fleets and construction equipment, universal joint products are operating within extreme parameters of environment and varying loads and speed.

For this reason, NIS[®] has completed comprehensive design and calculation data, in selecting appropriate steel quality, machined surface finish, heat treatment process, needle roller selection and seal configuration.

Combined with exhaustive factory testing, the final product represents a market-leading component, which is able to deliver high quality, high performance, and extended life cycles.

However, not to remain complacent, factory engineers are constantly reviewing processes and production criteria, in order to deliver optimum results. The range of product produced, is constantly being evaluated and extended to accommodate new market variations.

In all cases however, NIS[®] continues to challenge existing standards, and set new benchmarks within the industry.

Applications

Design and Measurement Style

Lubricator Types (Notes)

0: Lifetime lubrication	3: Angle lube fitting on center of cross
1: Regular lube fitting on side of cross	4: Regular lube fitting on center of cross
2: Regular lube fitting on end of bearing cup	5: Dual lube fitting, regular lube on side of cross and angle lube on center of cross

General Cap Design

Non-Wing Type

 R1 - Grooved	 R2 - Plain	 R3 - Cap & Bolt
 R4 - Lock Plate		 R5 - Bearing Cap

Wing Type

 LWT - Low Wing Threaded	 LWD - Low Wing Drilled
 HWD - High Wing Drilled	 RDG - Round Grooved

Nomenclature

Part Numbering System

Measuring Universal Joints

STEPS:

1. Remove bearing caps
2. Remove excess grease from bottom of the bearing caps & trunnion
3. Remove seals from bearing caps or trunnion - Seals are removed, as they must be compressed for accurate measurements
4. Reinstall bearing caps on trunnions
5. Measure as follows:
 - Allow a tolerance of
 - $\pm .005"$ for dimensions "b"
 - $\pm .003"$ for all others

Installation and Maintenance

Lubrication

The following specifications are given as a guide reference only, and do not apply where vehicle or machinery manufacturers have prescribed recommended lubricants and lubrication interval schedule. In the absence of above, the following guidelines can apply.

Interval

Industrial – Every 100 hours or monthly (whichever earlier)

Automotive – 3 monthly or every 8000km

Lubricant

An NLG1 base grade of no. 2 consistency grade is recommended. For additional benefits, the grease may contain extreme pressure (E.P) additives for long life characteristics.

Method

Please ensure zerk (grease nipple) is thoroughly cleaned of old lubricant or foreign dirt particles. Otherwise risk of contamination entering lubrication port may result.

Quantity Applied

Grease should be applied until excess grease is visible at each of the bearing caps. Grease should be applied using manual grease gun, and not high-pressure lubrication equipment; otherwise risk of damaging bearing cap seals may occur.

Methods of Retaining Universal Joint Kits

Various Design of Universal Joint Kits

Identification of Universal Joints

A. Identification by Size

Step 1:

Determine the "figure" number by referring to page 4 on the physical appearances of the Universal Joint.

Step 2:

Measure the dimensions shown on the "figure" number.

Step 3:

Refer to the catalog on page 11 for figure 1 to page 23 for figure 10.

Step 4:

Determine the part number by matching the dimensions measured.

B. Identification by Vehicle Model

Step 1:

Determine the "figure" number by referring to page 4 on the physical appearances of the Universal Joint.

Step 2:

Measure the dimensions shown on the "figure" number.

Step 3:

Refer to page 24 to 27 for the vehicle model.

Step 4:

Determine part number by matching the dimensions measured.
